

Example of my Magless

Magless 2021 Betsy Mead - Freeze & Fuse

Materials: Frit POWDER (any color); plastic or paper cups; flexible candy molds or ice cube trays; water; something to stir with; dust mask.

Method: Pour some water into a small cup--1/3 to 1/2 full

Add enough powder to make a stiff paste or frosting and stir it up. (The consistency is somewhat like a bucket of moist sand that you would use to make a sand castle).

Fill the molds to the top.

Allow water to come to the surface and blot dry with a paper towel.

When extra moisture has been removed, place molds in the freezer for 1-2 hours.

When glass has “frozen”, remove from molds and place on kiln shelf.

Fuse at 600	1000	30 min.
400	1300	20 min.
AFAP	960	60 min.
150	500	off.

Enjoy!
